PATENTED TECHNOLOGY

BIODEGRADABLE

Hydra•30 Greens

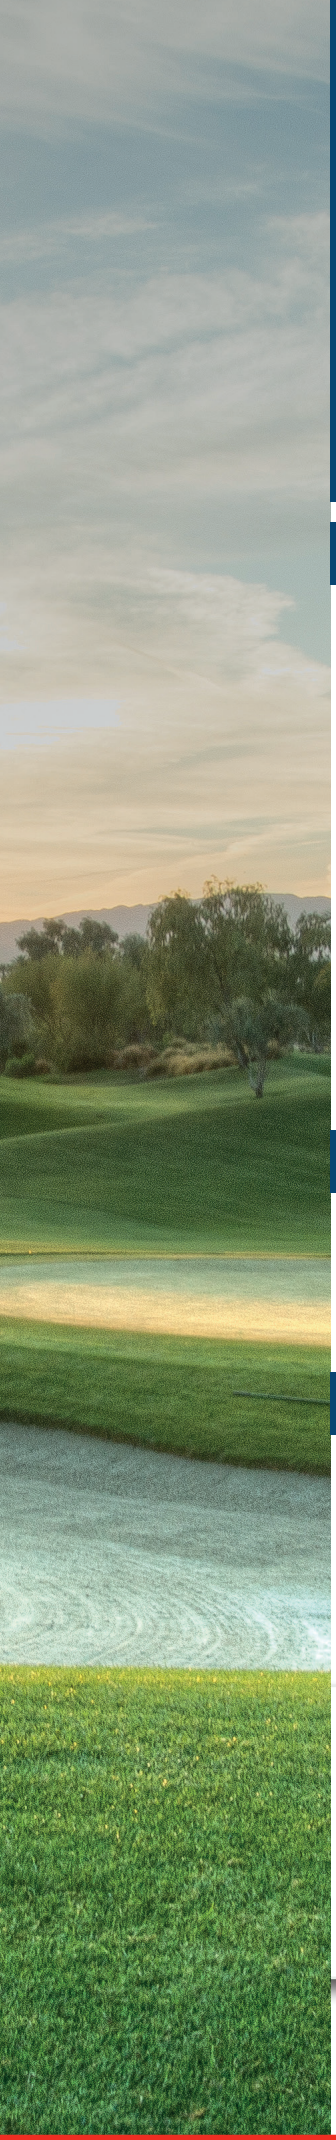

INFILTRATING & HYDRATING SURFACTANT

- Increases water infiltration, decreases overall water usage and creates a firm(er) surface
- Vitamin package aids in turfgrass stress resistance and enhances turf recovery
- Provides uniform soil hydration across different soil types

AQUA•AID

Hydra•30 Greens
Infiltrating & Hydrating Surfactant

Hydra•30 Greens is a proprietary wetting agent designed to deliver fast infiltration and deep soil hydration, ensuring optimal moisture distribution across various soil profiles. This environmentally friendly solution enhances water efficiency, reduces turf stress, and promotes resilience during periods of heat and drought. Packed with essential vitamins, **Hydra•30 Greens** supports turf health and recovery while also providing effective dew control for up to seven days to minimise disease risk. **Hydra•30 Greens** provides proven performance, improved water management, and a cost-effective formula backed by a money-back guarantee.

PRODUCT DETAILS

- **Optimised Soil Hydration**: promotes uniform moisture distribution across diverse soil profiles, ensuring consistent turf performance and firm(er) surface.
- **Advanced Turf Health Support**: enriched with essential vitamins to enhance growth, strengthen resilience, and accelerate recovery.
- **Enhanced Stress Resistance**: mitigates environmental stress factors, improving turf durability and recovery under challenging conditions.
- **Superior Water Management**: increases infiltration efficiency while reducing overall water consumption for sustainable resource use.
- **Proactive Dew Control**: minimises dew accumulation for up to seven days, lowering the risk of turf diseases and related maintenance challenges.
- **Economical and Guaranteed Performance**: delivers reliable, cost-effective results with a proven track record, supported by a money-back guarantee.
- **Patented Surfactant Technology**: features exclusive, patented formulation designed to enhance soil hydration and optimise moisture distribution for improved turf health and performance.

COMPOSITION

PFC 3(B) - Inorganic Soil Improver
Dry matter content: ..... 14,6% by mass
Ethylene oxide-propylene oxide copolymers (CAS: 9003-11-6)[1]
Where [1] CMC 1 virgin material substances and mixtures

DIRECTIONS FOR USE

- Apply 10 to 13 L/ha in 800 L of water at 30 day intervals or as needed.
- Irrigate with sufficient water to deliver Hydra•30 Greens to the soil profile - 3 mm or more recommended.
- DO NOT combine Hydra•30 Greens in the spray tank with pesticides or fertilisers unless prior use has shown the combination physically compatible, effective and non-injurious under local conditions.

Our **3D Technology** - patented, scientifically researched and proven - is a biodegradable addition of longer and multi-branched molecules to your growing media. While this technology may sound complex, its application is remarkably simple. And the results, they are nothing short of groundbreaking: the soil retains water longer, at the right depth, and the water reaches every spot. For a safe and sound surface. That's how we guard a green future together.
